

Recommendation

FIFRA SECTION 2(ee) RECOMMENDATION FOR DISTRIBUTION AND USE IN THE STATES OF INDIANA, ILLINOIS, IOWA, KANSAS, KENTUCKY, MICHIGAN, MINNESOTA, NEBRASKA, OHIO, PENNSYLVANIA, SOUTH DAKOTA, VIRGINIA, AND WISCONSIN

TRICOR[®] DF 75% Dry Flowable Herbicide EPA Reg. No. 70506-103

FOR FALL APPLICATION TO CORN AND SOYBEANS

This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by USEPA.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read and follow all applicable instructions, restrictions, and precautions on the EPA-approved label. This label and the federally registered label must be in the possession of the user at the time of pesticide application.

WEEDS CONTROLLED	RATE: OUNCES TRICOR 75DF/A (Rate pounds ai/A)
Common Chickweed, Field Pennycress, Henbit, Maretail, Winter Annual Mustard spp, Palmer Amaranth, Prickly Lettuce, Purple Deadnettle, Shepherd's Purse, Yellow Rocket, common dandelion seedlings	4– 12 (0.19 – 0.56)

SPECIFIC DIRECTIONS

Tricor[™] 75% DF Herbicide may be used alone or in combination with other registered herbicides as a fall applied ground broadcast application for burndown and residual control. This fall application is made after the preceding crop has been harvested and at the first sign of germination of any of the listed winter annual broadleaf weeds.

This application will reduce weed cover before spring planting. A fall application of TriCor 75DF is not intended to provide season long weed control. It is to be considered a part of a weed management program that will require additional application of a residual and/or post emergence herbicide for season-long control. This application will provide burndown and residual control of the listed germinating weeds. For optimum control, weeds must be less than 2 inches in height or diameter. For best results, make the application when the winter annual weeds begin germination.

The length of residual control will increase with the application rate of TriCor 75DF. If emerged weeds are present and are greater than 2 inches in height or diameter, use 2,4-D or an appropriate alternative post emergence herbicide in a tank mixture with TriCor 75DF. To obtain maximum burndown of existing weeds of any size, use crop oil concentrate (COC) or an adjuvant in the tank mixture. Control of established common dandelion requires a tank mixture containing at least 1 pint/acre of a 4 pound/gallon of 2,4-D herbicide.

Soybeans can be planted at any normal time the following spring. Corn can also be planted at any normal time the following spring after fall TriCor 75DF rates of 5 1/3 ounces per acre or less. Corn can be planted at 4 or more months after fall Tricor 75DF at the rates on this document greater than 5.33 ounces per acre.
